Subject: LDW: Rain Sampling Round 9 Results

Jeff and Rick;

I just received the Round 9 and Round 10 passive deposition (rain) sampling results. Two stations had detects for PCBs during Round 9:

- King County International Airport – Aroclor 1254 = 0.0486 µg/L (MDL = 0.020 µg/L)
- Georgetown Station – Aroclor 1254 = 0.035 µg/L (MDL = 0.022 µg/L)
- Georgetown Station – Aroclor 1260 = 0.040 µg/L (MDL = 0.022 µg/L)

The MDLs for all of the Round 9 samples ranged from 0.016 to 0.022 µg/L.

PCBs were not analyzed for Round 10 as no PCBs were detected in previous rounds prior to Round 9. I have told the lab that we will continue to analyze for PCBs for subsequent rounds.
